xpressions

AVOID DAMAGE TO YOUR DISPLAY, USE PROPER SET-UP PROCEDURE.

 Unpack the display, making sure graphics are face down.

 Begin to lift display by a center hub and connect. Red hubs signify bottom of display.

Engage at least 1 of the hub connectors on each side of display.

With red hubs now on the floor, engage the remainder of the hubs.

5. Enjoy your display!

 Make sure to manually release all connectors before breaking down.
Frame will collapse after the last connector is released. Be ready.

Important! Before and during set-up make sure skins are not twisted or caught on connectors or hubs, (see figure 1) if you feel tension stop! Check for snags and begin again (see figure 2).
