

# Snap Frame Sidewalk

R3.111912

5'9"

H\_DS05442

H\_DS05441

H\_DS05440

1. Pull the legs of the frame apart and lock both side support bars in place. This will move the legs of the frame to the fully extended position and stabilize the display.

2. Snap open all four sides of the frame and carefully remove the clear protective cover.  
\* Do not discard protective cover. It will be placed on top of the print.

3. Place the clear protective cover over the print and begin inserting both into the frame. Slide the edges to the top and close the top snap to hold them in place. Carefully smooth out the print and protective cover and snap the remaining open sides of the frame closed.

4. Repeat steps 2 & 3 for the second print.

## Attaching the optional brochure holder (H\_DS05444)

If using the Brochure Holder, simply face the mounting arms toward the display and place on the side support bar. Repeat if using a second brochure holder.

Do not set up your Snap Frame Sidewalk in extreme winds (24-31 mph or higher) and/or severe storms. User must read and observe construction sheet. If this is done incorrectly it may result in damage to the unit, injury or death, and all warranties will be void.
